

## Dimensions (WxDxH) MM – 1118 x 1219 x 2316

### Product Overview

Reliable, hygienic and easy to use. These 110v mains connected toilet units are intended for long term hires where they can be connected to a water supply, mains drains/waste tank and electrical supply. The traditional cistern flush porcelain bowl and hot water washing facilities make this the closest thing to the loo people use at home. Commonly used on multi-storey building sites as these units don't require a regular service like a standard port aloo.

It is the hirers responsibility to ensure any toilet they hire that needs connecting to the mains, that they must first check they have the correct permits and licenses from their local waste/water authority. Tardis are not responsible for obtaining or managing such permits or license. If in doubt please contact your local waste/water authority.

### Technical Spec

- Power rating – 3kw water heater supplied by water reservoir filled via the mains
- Supplied with a 16amp male plug.
- 110mm waste outlet
- 15mm water inlet
- Full RCD protection.
