

Dimensions: 500mm Wide x 310mm Deep x 520mm High

Main Features

- ❑ This box is designed to house our smaller electric on demand pumps to protect them during cold and wet weather.
- ❑ An electrical connection lead is included, 110v or 240v to suit your requirement.
- ❑ NB: It is advisable to lag the exposed water pipework to protect freezing.

Unit colours may vary

Pump hired separately

We hire a comprehensive range of **diesel, petrol and electric pumps** for a variety of uses including submersible pumps which are ideal for clearing flood water in domestic situations.

A frozen pump can be an expensive problem as frozen water expands and can cause damage to internal workings.

If you intend to keep the electric pump outside we strongly recommend that you hire a pump protection box, to protect against the wet elements. However the pump protection box doesn't protect against freezing conditions. Please ensure you disconnect the pump and take indoors during freezing conditions.
