

Dimensions – 2800mm long x 1400mm wide x 1475mm high

This Tardis 2000 litre self contained/fully insulated water system is the perfect solution for beating the demands of UK winter weather. Fully insulated and heated using a thermostatic heater protects water tanks, pump and pipework from freezing conditions. Delivered empty this set up is simple plug and play system to get clean water on site.. Also featuring a low level water alarm with flashing beacon on top to signal when you require water before running out completely. Fully lockable and well protected against vandalism and theft as all elements are internal to the lockable cabinet unit including the 240v pump.

Add a Tardis Fitter to install Heat Tracing to the external pipework on site as an additional extra for full system protection against frost.
