

Up to 4 people can shower in complete privacy, allowing changing and showering within one single cubicle.

Features self-contained fold down steps which can be adjusted for uneven ground.

When siting the shower trailer, choose your location carefully. The trailer should be sited on solid level ground.

The unit has 4 wind down jack leg stabilisers which if sited on grass can easily sink in, so we recommend timber supports.

Spare light bulbs are stored in the service compartment of the unit

- The trailer hitch key and individual door keys are supplied on a single keyring for which a signature is required on delivery. Please note any lost keys must be paid for.
- The shower should only be moved by a competent operative using a 4x4 with correct tow hitch, all damage is chargeable. If Tardis are asked to move the unit during the hire period this will be chargeable.
- Decide how you want to manage your waste water; allow it to drain into the ground, use a waste storage tank which Tardis can provide or use existing drainage on site (please check you have the authority to do so).
- If opting for the waste tank option, check you have the space to store the unit as the footprint will double. You may also require a pump.
- Water is heated by propane gas which is stored within the service compartment of the unit. Any gas bottles supplied by Tardis must be returned.
- Carbon monoxide detectors are fitted to the showers. These should be tested regularly throughout the hire as they are there for your safety. If the alarm sounds, stop using the showers and contact Tardis immediately.
- Always check to ensure the gas is connected correctly. If you suspect the smell of gas, check the threaded fitting on the propane gas bottle is tight and secure. If in doubt, seek advice from us.
- Water supply used must be clean and free from contamination (not grey water).
- Tardis are not responsible for drops in or lack of water pressure on site. Please check with site management that you have sufficient water pressure, being mindful that as the population of your event increases on site, water pressures may vary. The further away from the water source the shower is located the lower the water pressure will be. Tardis can supply water tanks, water pumps and a water delivery service if required.
- The boiler unit will stop working if the water pressure falls too low.
- Ensure you have the relevant skills to connect the unit to the power, waste and water connections. If not, Tardis can provide a fitter at an additional cost.
- Shower units will be delivered in full clean working order and tested prior to delivery.
