

- ❑ Tardis on-demand water pumps are not waterproof, and therefore must be kept dry.
- ❑ On-demand pumps are not designed to operate in sub-zero temperatures or frost conditions.
- ❑ When temperatures drop to 1 degree Celsius, the pump must be taken out of service.
- ❑ Switch it off, disconnect it from the water supply and move it to a warmer environment.
- ❑ If water freezes anywhere inside the body of the pump, it will become damaged and a repair or replacement would be necessary.
- ❑ When on hire, the good running order of the equipment is your responsibility and so, if damage occurs you (the customer) would incur the charges.

**Our new pump protection boxes are designed to house our on-demand pumps protecting them during cold weather. Now available for hire**
