# Bulk Water Delivery

## Bulk water on demand for all your requirements.

Our Tardis H2O tankers can provide both clean, or (DWRS approved) drinking water nationally. All clean water is drawn from licensed authorities, across the country. Our water vessels range from 1,000 litres, all the way up to a huge 30,000 litres!

So, what's the difference between clean and drinking water?

### Drinking

Drinking water is also known as potable water. For it to be deemed safe to drink, it has been tested by our water hygienist and approved to "drinking water regulation standard." This water can be used, for events, food preparation, ships and even emergency situations.

Examples: Preparation of food, construction sites, festivals & events, ships and emergency situations.

### Clean

Clean water can be utilized in many ways, from cleaning machinery, to concrete manufacturing, to filling swimming pools and supplying welfare sites. The options are virtually endless. To ensure the highest quality of water is supplied, our tankers are continuously cleaned and treated.

## Tank Volume Calculator

Unsure of your water requirements? Don't worry, just use our online calculator, to determine your capacity.

<https://www.tardish2o.co.uk/general/tank-volume-calculator/>

16,000 litre Tardis H2O Water Tanker

All of our water is treated and regulated by an international standard BS 8551:2015.

All of our  
Tankers are  
FORS Silver

# Emergency Water Supply

With you when you need it the most.

Tardis H2O on site can supply you with water in any emergency!

We have a fleet of tankers and trained personnel which enables us to deploy water to you, where and when you need it!

Supplying water for hospitals, factories and residential areas who have been in a water crisis, we're prepared for almost any situation! If you need water in a hurry, please contact us and we'll be happy to help!

Tardis H2O Hygienist

## Barrier & Ballast Filling Services

**Barrier & Ballast Filling Services - Keeping your workforce & events safe!**

Providing extra safety, water filled barriers are ideal in situations that are high-risk, such as motorways and highways with fast moving traffic, and anywhere with a high foot fall, like a festival or event. If impact was to occur, you have a reduced risk of injury in comparison to the concrete counterparts.

Water can be used as a Ballast for construction or events. The water is used to weigh down multiple IBC's on a marquee or used in a buried tank. A very versatile choice as once the project is completed, it can simply be removed.

Our tankers start at 16,000 Litres and go up to 30,000 Litres.

# Tanker Trailer Hire

All of our Tankers  
are accredited  
Silver FORS.

We specialize in delivering bulk water to construction sites

The next best thing to providing a tanker full of clean or drinking water will be leaving a trailer on site. Tardis H2O have multiple sized trailers which can be delivered filled. Alternatively, they can be delivered empty with a follow-up fill from one of our Tardis H2O Tankers. An additional extra could be a pump to provide a better flow rate. These are available for short or long term hire.

- 18,000 Litres
- 25,000 Litres
- 30,000 Litres

Where large volumes of water are needed, please let us know your requirements and we'll provide a suitable solution.

EUSR Certification  
All Tardis Drivers  
are EUSR trained

| • Water Soak Away       | • Water for Batching Plants      |
| • Swimming Pool Filling | • Ballast for construction sites |

16,000 Litres of clean or drinking water delivery

# Static Water Tank Hire

10,000 Litre Water Tank

Tardis H2O can provide long term water storage tanks ranging from 1,000 Litres to 30,000 Litres.

The inlets and outlets for our water tanks can be adapted at your request. We can also supply level indicator/float gauges on the tanks. These allow sites to monitor their water levels. Our nationwide bulk water delivery enables us to offer a next day re-fill service if required.

Our static Water Tanks are an excellent bulk water storage option. These are ideal stand-alone units, or can be used as part of your temporary water supply network. Water tank hire is available on a short or long term hire basis.

Potable water tanks are fully DWI (Drinking Water Inspectorate Regulation 31) and WRAS (Water Regulations Advisory Scheme) approved. Therefore, all tanks are treated prior to delivery to strict cleanliness standards in line with our health and safety procedures.

Our Water Tanks can be prepared for clean or potable (drinking) water. We would only recommend static tanks to be used with clean water only, with drinking water it will need to be tested every 24 hours.

# Towable Water Bowzers

## Road Towable & Site Towable

Towable bowzers are the convenient hire option for small to medium capacity water demands. They are ideal for construction sites, festivals and outdoor gatherings.

There are two different options, a road towable bowser or an on-site towable bowser with capacities of 1,000 litres, 2,000 litres or 7,000 litres.

Road Towable Water Bowser

Site Towable Water Bowser

Choose our “Big Daddy” for a large capacity requirement.

Offered from 7,000 to 10,000 litres, with agricultural tyres our Big Daddy is ideal for construction sites and can also double up as a dust suppressor if needed, call us to find out more.

Site Towable Water Bowser

## Water Pumps for Hire

A wide range of pumps are ready to be teamed up with our water tanks. By using our electric, on- demand water pumps, you’ve created the ideal set up for most welfare units.

Diesel Pumps

Petrol Pumps

Electric Pumps

# Dust Suppression Services

## Obliterate dust with our "Dustroyer"

To minimize dust and keep your environment and workforce safe choose our Dustroyer!

## The ideal dust suppression solution.

Run by a petrol pump, with a wide spray pattern plate, and firm grip tyres it's the ultimate in dust suppression on any terrain. Ideal for construction sites, approach roads, car parks and quarry roads, in any weather!

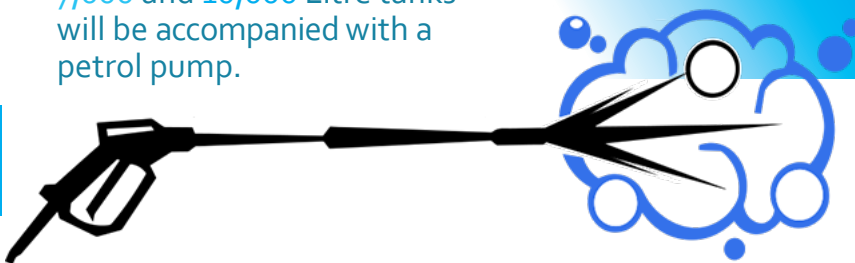

### Our Big Daddy

bowzers have the capacity of:

7,000 Litres

10,000 Litres

7,000 and 10,000 Litre tanks will be accompanied with a petrol pump.

Choose our pressure washer bowser for portable deep cleaning. Modified from a standard bowser this is the ideal solution for readily available cleaning on site.

Our Pressure Washer Bowser is as simple as "set up and go". For more information call our offices on 0800 731 0589.

## Pressure Washer Bowser Hire

# Pillow Tanks

For your extreme water needs.

Tardis H2O offer a range of pillow tanks for preserving water resources, for both temporary and permanent solutions. Capacities start from 10,000 litres and go up to 250,000 litres. For hire we offer anything up to 50,000 litres, anything in excess of this is available for purchase.

Bespoke sizing options are also available, call us for more information.

A sheet needs to be placed underneath a pillow tank for support.

The pillow tanks are ideal for water storage on industrial sites and emergency situations.

## Benefits include:

- Ideal long term water storage
- Requires no maintenance
- Easy to transport
- Weather resistant -30°C to +70°C
- Pillow tanks can be folded completely if not in use.

Pillow tanks are quick and easy to use, just unfold and fill. They can be adapted to use different fittings.

# Water Chlorination Services

## Clean from start to finish.

Water Chlorination is the process of disinfecting and removing harmful bacteria in water. We offer these services on water storage vessels such as IBC water tanks and static tanks. This service also covers, connections, pipework and water systems.

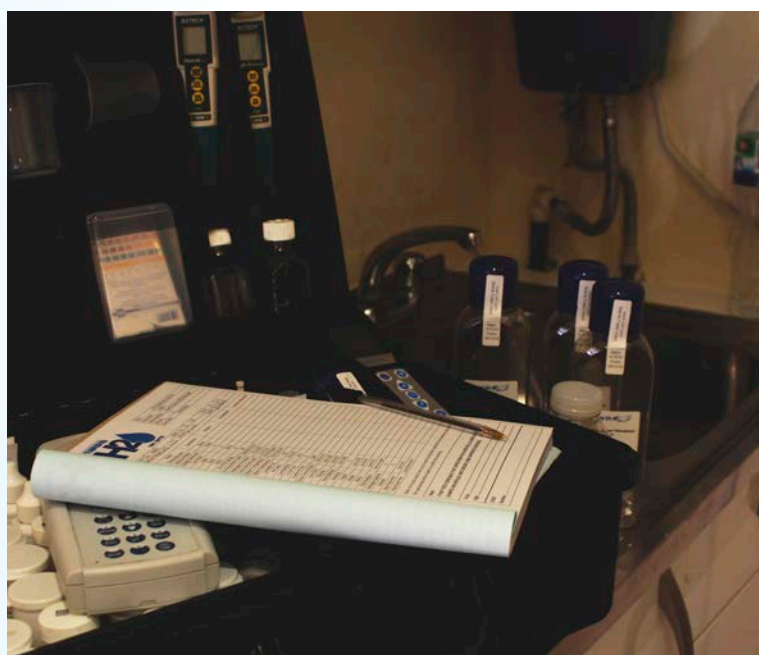

Once a vessel has been cleaned and chlorinated you also need to think about the pipework and fittings. If you were to send water through unchlorinated pipes after a vessel has been cleansed, it will render the job useless as there will be bacteria and algae present within the pipework. This also means the water that flows backwards will contaminate the vessel again.

As part of our duty of care, every water vessel is audited prior to leaving the depot to ensure they have been treated and cleansed.

### Tip:

Water vessels that are exposed to sunlight will accelerate algae growth. We advise to keep them out of sunlight as much as possible, for maximum protection we suggest hiring out one of our IBC jackets.

# On Site Deep Cleansing Service

Ensuring your water vessels are immaculately clean.

Tardis H2O are skilled experts in deep cleansing of water vessels, whether it's clean or potable water.

Water vessels that are left to their own devices can start to gain harmful bacteria over time. Even with a simple wash out the bacteria may still be present.

All Tardis H2O water tanks, bowzers and IBC's are pre-tested and cleaned before delivery. This is to ensure the vessel is clean inside and out. We maintain records of this operation as part of our duty of care. Once on hire, it then becomes your duty to ensure that it is kept out of the sunlight (when possible).

If you are storing drinking water for more than **24 hours**, you should not allow people to consume the contents of the vessel without a testing regime in place.

EUSR Certification  
All Tardis Drivers  
are EUSR trained  
and qualified.

Tardis H2O technician using a pressure washer

Our deep cleansing service will keep your water tanks clean and bacteria free, ensuring it's safe for any use.

**BEFORE**

**AFTER**

## Bulk Water Solar Panel Cleaning

Dirty solar panels are bad for business, as the dirtier they are, the less power is generated. Tardis H2O provide bulk water delivery for agriculture and construction with up to **30,000 Litres** per load. We'll fill up the water tanks on site, ready for your solar panels to be cleaned.

# Water Testing Services

Tardis H2O has a professional team to assure the quality of your water.

Drinking water that is stored in uncontrolled conditions for more than 24 hours must be tested. The presence of E-Coli and other bacteria may be present, so to assure the water is fit for human consumption we can test it.

At Tardis H2O we have experts who provide water testing services for you when you need it.

Our laboratories are UKAS approved and we work within the DWI H&S and BS8551 (2015) guidelines.

We follow strict guidelines as set out in ACOP L9 (2013) Legionnaire's Disease.

We also follow DWI (Drinking Water Inspectorate) guidance documents on the implementation of the water supply (Water Quality Regulations 2000 as amended in England 2012).

# Tardis Fitter Services

We have the right people for the job

We can provide professional plumbing and electrical services on site, Tardis fitters are able to integrate the equipment to your toilet block or welfare cabin. Call us if you have any questions.

# Water Cooler Hire

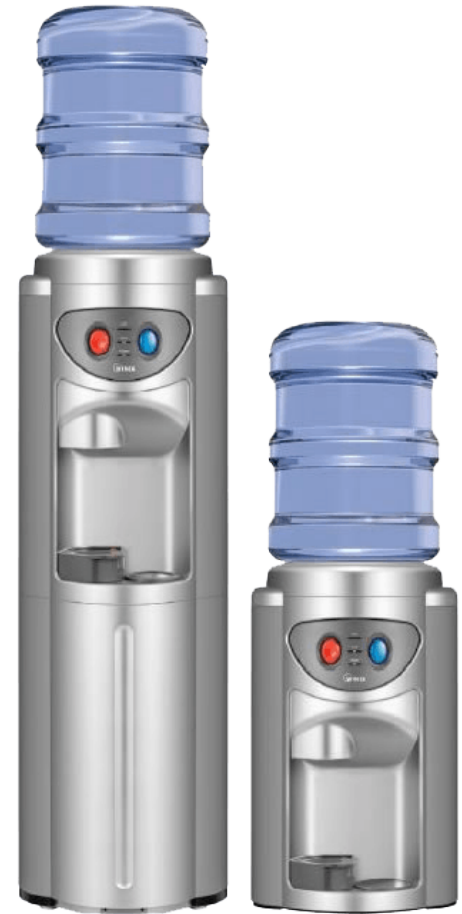

A great solution when you don't want to compromise on space.

Our Water Cooler hire service is an excellent solution for offices and construction sites to have quality assured drinking water supplied on demand.

They are available for long term or short term hire.

Where space is limited, our compact water coolers can be fitted and ready to refresh your team.

Water coolers provide chilled or hot water on demand. An 18.9 litre water bottle is also available which can be scheduled to be replaced.

# Multi-Point Drinking Water Station

The perfect solution for festivals, the real queue buster.

Our drinking water station is a winner at events and festivals because they can be placed in conveniently located places.

The station is easily setup, therefore can be moved, providing drinking water on demand. It can be connected to any of our H2O on site bowzers or tanks. It also features WRAS approved tap fittings. This solution is ideal when you have a high demand for drinking water and a high volume of people.

Drinking water station

The same hygiene preparations are taken pre-delivery, making sure that the station is fit for drinking.

# Connections Supply + Pipework

Any size fitting connections, we've got it covered!

A variety of fittings can be used depending on what's required. For example all drinking water will use WRAS approved fittings.

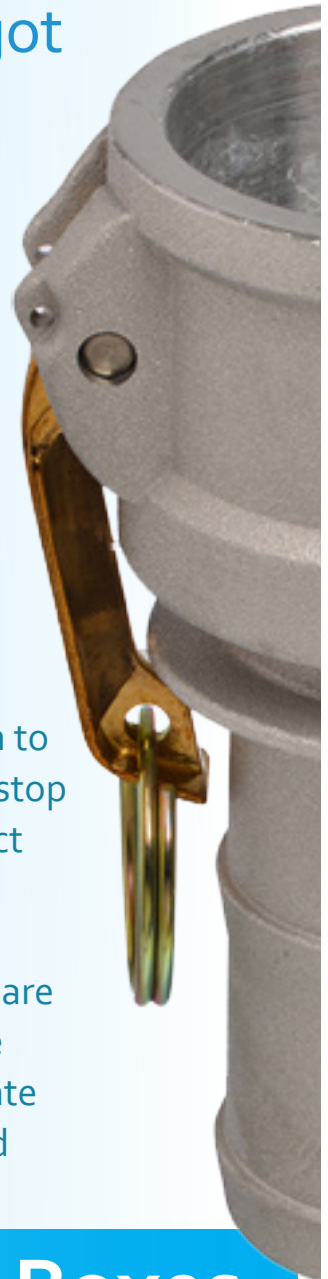

Regular fittings for water tanks can be 2 bauer or 1 plasson. They're used in connection with 1 MDPE pipe for an on-demand water pump. These connections can be adapted to a petrol pump, so they can be used with a variety of water vessels including bowzers and IBC's.

## IBC protection solution

These jackets are an ideal solution to protect your IBC from sunlight to stop algae forming, and will also protect from frost in the winter months. They will withstand temperatures between -35 to +75 degrees. They are lightweight, tear resistant and fire resistant, making them the ultimate protection, throughout winter and summer!

## Pump Protection Boxes

### Protection for all seasons

With our pump protection boxes, you can assure your pumps will stay functioning during rough weather conditions. The box offers protection from the day to day site use, while allowing ventilation to the pump motor. We recommend storing them indoors in winter as the box doesn't provide full frost protection. We do offer lagging and heat tracing services for preventative measures of frost damage across site.

# Bottled Drinking Water

Sometimes the best solution is the simplest. What could be easier than providing bottled drinking water for your event or festival visitors?

Bottled water can be rapidly deployed as a quick fix for commercial, residential, events and construction sites. In emergencies such as loss of domestic supply this is an ideal solution.

Item	Pack Size	Pallet Quantity
330ml Screw Cap	24 bottles p/case	117 cases p/pallet
330ml Screw Cap	24 bottles p/case	104 cases p/pallet
500ml Screw Cap	24 bottles p/case	78 cases p/pallet
500ml Sport Cap	24 bottles p/case	78 cases p/pallet
750ml Sport Cap	12 bottles p/case	90 cases p/pallet
1.5 Litre Screw Cap	12 bottles p/case	52 cases p/pallet

We provide bottled drinking water in a variety of sizes:

- 330ml
- 500ml
- 750ml
- 1.5 Litres.

Both bottles and cartons are 100% recyclable. The bottles are made up of up to 51% already recycled material.

# Spring Water Tetra Pak Cartons

Plastic is not fantastic. At Tardis H2O we provide an eco - friendly solution to drinking water, with our spring water tetra pak cartons.

- Still Spring Water (Source 1).
- Aseptically packed. Preservative free.
- Packed 24x250ml cartons in cardboard cases.
- 250ml Tetra Carton with Foil Tab.
- Intolerances: Suitable for vegetarians, suitable for vegans, free from nuts and nut derivatives, free from gluten, free from dairy products, free from GM.

# Tardis H2O Tankers

The easiest form of water delivery.

Amongst our fleet of vehicles, we have water tankers readily available to deliver nationwide. They range from 16,000 litres to 30,000 litres of clean or drinking water. They are compliant with chapter 8, Crossrail and HS2. All of our tankers are fitted with the latest tracking technology, enabling us to give a more accurate delivery time.
