TARDIS
ENVIRONMENTAL UK

TARDIS

ENVIRONMENTAL UK

Here at Tardis, we pride ourselves on being able to deliver fast and efficient service to our customers throughout the UK. We have over 28 years of experience within the wet waste removal, toilet hire, tank hire and water bowser hire industry. Our depots are strategically located nationwide to ensure a fast quality service. We have worked hard over the years to become an industry leader in the services we provide.

Our out of hours contacts are always on hand to ensure we go above and beyond to solve your problem. Additionally, we offer a next day service.

Our competitive advantage is the ability to react to your requirements as and when needed. With a modern fleet and well-trained staff, we work to ensure you get the service you deserve. Our call operatives are trained to understand your requirements while our field operatives are given extensive training to be able to assist from site level. No matter your request, we can help.

Tardis Tanker Fleet

Our fleet of vehicles and trained operatives look after a mixture of different jobs and services. All waste removed from customers sites is disposed of and treated ethically with accompanying duty of care tickets. These are generated electronically for every load we transport. Here at Tardis, we take the safety of our operatives and other road users as our number 1 priority. That's why we have invested massively in bringing our transport operations up to FORS standard. Our London fleet also adheres to the new Ultra Low Emission Zone regulations. All vehicles fully compliant using Euro 6+ engines, which operate daily within the ULEZ. This page details our various fleet. For further assistance, please call our sales team.

26 Tonne Tanker

The 26 Tonne Tanker is our most popular unit in the fleet. They are built with the main purpose of removing wet waste and delivering clean water. They also have fitted wash down facilities to assist with cleaning any residual waste that is left.

Variations:

- Split Tanker (Various Sizes)
- Wash Down
- Wet Waste (Standard Version)

All variations can be Chapter 8 and Crossrail Complaint

32 Tonne Tanker

The 32 Tonne Tanker works side by side with the 26 Tonne Tanker. As it is a bigger vehicle they can carry higher capacities of wet waste. If site access isn't an issue you might see this particular vehicle more often than not.

Variations:

- Split Tanker (Various Sizes)
- Wash Down
- Wet Waste (Standard Version)

All variations can be Chapter 8 and Crossrail Complaint

44 Tonne Tanker

The ideal tanker for removing bulk quantities of pumpable wet waste. Our 44 Tonne Vacuum Tanker is used for large quantity jobs due to its capacity. They can remove 27,000 Litres (6000 Gallon) of wet waste.

7.5 Tonne Tanker

The 7.5 tonne mini tanker is used for our toilet servicing. In a pinch, it is a viable option for sites with restricted access due to its versatility. The mini tanker carries 2700 litres (600 Gallon) of wet waste with a small partition of clean water.

Mobile Vacuum

The mobile vacuum unit is the last alternative for those small access jobs. The unit comes with a split tank. It can be towed almost anywhere and can hold up to 2000 litres of wet waste and 700 litres of clean water.

Wet Waste Removal

With a distinctively recognisable brand, Tardis has grown over the years to be able to offer a service that delivers what our customers need.

Our fleet contains a range of 7.5 tonne, 26 tonne, 32 tonne and 44 tonne tankers. No matter what it is you require, we have the ability to ensure our services are delivered in a speedy and professional manner.

For bulk water needs, you can check out our water division, Tardis H2O. Alternatively, Tardis split tankers can provide a small amount of clean water to an IBC or a welfare unit.

Additional Services:

- Septic Tank Emptying
- Grease Trap Emptying
- Welfare Unit Servicing
- Toilet Block Tank Emptying
- Inspection Chamber Emptying
- Pump Chamber Emptying
- Washdowns
- Pressure Washing
- Interceptor Emptying
- Drilling Slurry Emptying
- Ground Water Removal
- Water Tank Refills (Clean Water)
- Oil and Water Removal

* If it's wet, we can remove it!

Our fleet is equipped and prepared to respond to any job that they come across.

Interceptors contain a waste known as oil and water. They intercept the harmful waste into a chamber that will need emptying from time to time. The same can be said for any traps or tanks that could contain grease, grey water or effluent waste.

In addition, we can remove drilling slurry waste as long as it is wet enough and pumpable. For all wastes other than sewage, please contact our sales team for assistance and an official quotation.

Portable Toilet Hire

Short & Long Term Toilet Hire

The foundations of Tardis was built upon our toilet hire and services. The growth of over 28 years has made us a market leader in this industry. With knowledge and experience in providing the best toilet services to construction, events and festival industries nationwide.

Over time our product range has increased to accommodate our customer's needs.

Toilet Range

- Cold Wash Portable Toilets
- Hot Wash Portable Toilets 110v
- Hot Wash Portable Toilets 240v
- Event Portable Toilets
- Mains Portable Toilets
- Disabled Portable Toilets
- Warm Wash Portable Toilet
- Tardis Lifting Protective Toilet Cage
- Confined Space Toilet (Camping Toilet)
- Hand Sanitiser Stations
- 2 Person Hand Wash Station

If it's a special event and requires something a little more luxurious, then you require a luxury toilet trailer. Not only do they look better but provide those extra comforts we are all use too.

Next, you need to consider quantity. Tardis has a large stock of all the toilets within its product range. All toilet hires on a short or long term basis come with toilet servicing. They are booked in on a weekly basis unless specified to your specific requirements.

A general features overview for all our toilets:

- Recirculating Chemical Flush (Mains Excluded)
- Hand Operating Flush (Foot operated flush available)
- Hand Sanitiser (Event Toilets) or (Cold Wash-Hand Basins)
- Integral Vents
- 2-Roll Toilet Roll Holder
- Plastic Toilet Bowl and Seat
- Internal Lock (External can be fitted upon request)
- Translucent Roof
- We can fit push lights as an optional extra

Portable Toilet Servicing

The service provided ensures a fresh smelling toilet with consumables replenished. The servicing process includes waste removal, refilling of biodegrading liquid and fresh water. The unit is sanitised from top to bottom, restocked and left smelling fresh ready to be used again.

BEFORE

AFTER

Emptied & cleaned.
Full Servicing

If your units need a more regular service, please mention your requirements when planning or during your hire. If it's an event you require us to service, then we will need to know the full range of services. Also, providing the event details will help us tailor your requirements and offer you the best solution.

In terms of the Tardis fleet, not only do we have a huge variety of tankers but service vehicles too. The standard service truck we use is a 3.5 tonne. For events or construction sites that have higher quantities of wet waste to remove, we can use our 7.5 tonne Service Tanker.

Portable Urinals

Tardis urinals provide the simplest and most effortless way to cut down queue times. With a higher ratio of male to female attendants at events, the easiest way to combat welfare is to use urinals.

**We offer
a few
variations of
urinal:**

- Single Bay Urinal
- 4 Bay Urinal
- 6 Bay Urinal
- 20 Bay Urinal

No complications, no additional requirements just a tank we can empty as part of a scheduled service. Heavy Events would require an on-site service team as they would require regular emptying.

4 Bay Mens Urinal

6 Bay Mens Urinal

20 Bay Mens Urinal

All of our urinal bays use a waterless system and come with hand sanitizer.

The 4 and 6 bay urinal is often used in conjunction with our portable toilets. This is to eliminate queues for the ladies who can use the portable toilets instead.

Urinals are always a good option for large events including a stag do or sport events.

Portable Shower Hire

The self-contained 4 bay shower unit allows for 4 people to shower in privacy. A great addition to have on a construction site or an event. By connecting the bottled gas, electricity and water supply you will have a fully functioning shower unit. They require a waste run off so keep that in mind in where the shower unit is set up.

4 Bay Gas Shower

In addition, Tardis can provide bulk water tanks and on-demand pumps, as well as waste tanks and fitters for a complete setup. Please contact our office for a quotation for a full shower setup.

Single Electric Shower

Single Electric Shower

We also can provide a single electric shower. This particular unit will require water and electric supply with a runoff for the waste. They are suitable for smaller construction sites or events.

It includes inside space for you to get changed along with a warm shower. It's extremely useful as a quick fix solution if you need one.

Site Water Services

Water Tanks

Tardis has a large range of water tanks, ranging from 1000 litres all the way up to 30,000 litres. These water tanks are commonly used in conjunction with welfare cabins for bulk water supply.

Tardis offers a nationwide water delivery service. In addition, if you require a welfare setup we have on-site water and waste fitters who will be able to provide this service. We also provide fittings and a pipe lagging services if the site requires it.

Common Water Tanks

- 1000 Litre
- 2000 Litre
- 5000 Litre
- 10,000 Litre
- 30,000 Litre

The 1000 litre water cube is found on almost every construction site. We hire these out on long or short term basis with an optional scheduled refill if required.

IBC

IBC Jackets

Exposed IBC's to sunlight can cause a wide variety of issues. With sun exposure, algae growth and harmful bacteria will grow exponentially. IBC Jackets help reduce growth and can protect it from the UV rays of the sun. They are also useful in the winter months to prevent water from freezing.

Towable Bowsers

Variations of Bowser

- 1000 litre
- 2000 litre
- 5000 litre
- 7000 litre
- 10,000 litre

Tardis offers a fleet of road towable and site towable bowsers, ranging from 1000 litre to 10,000 litres. These are also available with petrol or electric pumps. We also offer different styles of bowser.

Road Towable Bowsers

Site Towable Bowsers

Pressure Washer Bowsers

Fuel Bowsers

2000 Static Water Tank with Pump

We fabricate static 2000 litre water tanks in frames with a pump protection box. The box can be used with petrol or electric pumps.

Vessel Cleansing & Chlorination

Tardis H2O on site are skilled experts in deep cleansing of water vessels, including IBC and static tanks. Additionally, we can provide water chlorination services to ensure the water is safe to use on site.

Tardis water tank chlorination and pipework services ensure that water tanks and cabin pipework is chlorinated to guard against diseases such as Legionella. Our Tardis Water Hygienist can conduct on-site testing to make sure your water is fit for purpose.

Water vessels that are left to their own devices can start to gain harmful bacteria over time. We pre-test and clean any water vessel that leaves our depots nationwide. We maintain records of this operation as part of our duty of care.

Dust Suppression

A problem on site during the summer months is dust. To cut down on this issue dust suppression is used. Tardis H2O has a range of dust suppression bowsters from 2000 litres up to 10,000 litres. Powered by a petrol pump, it's just a matter of starting it up and off you go. There is a site towable bowster with other variations being road towable too.

Tanker Trailer Hire

When your water needs are thirsty, Tardis provides a more extensive 30,000 litre tanker trailer solution. Available with petrol or electric pumps and on-site waste and water fitter service.

Water Pump Hire

If it's a pump your looking for, then we got you covered. The pump range includes clean, dirty or sewage type pumps. Our most popular being the electric on-demand pump, which is used in most welfare setups. For a full list check out the spec sheet library on our website.

For extra protection from seasonal and general use, we offer a pump protection box.

Bulk Water Delivery

Need a lot of clean water fast? Our tankers can provide bulk water as and when you need it. Our fleet contains H2O tankers which can carry up to 30,000 litres. Tardis tankers deliver bulk water that has been extracted from a potable source. Quality assured drinking water is also available on request.

Water for Soakaway Tests

Tardis has experience in providing bulk water for soakaway tests. We commonly supply water for these tests for geotechnical companies. We have a fleet of tankers from 16,000 litres up to 30,000 litres of large bulk clean water. We can also provide additional pipework (150m) for sites with restricted access.

Water Barrier Filling

Working in dangerous environments such as motorways, safety is paramount. One of the safety precautions used is plastic water barriers. Without the water, the barriers themselves are useless. By adding the water, it helps absorb the impact of incoming traffic. Tardis H2O can provide the bulk water for filling water barriers. All Tardis tankers are Chapter 8 and Crossrail Complaint.

Drinking Water

The opposite service to clean water delivery is our drinking water delivery. All drinking water is treated to the correct standards that are BS8551:2015 Provision and Management of Temporary Water Supplies and Distribution Network.

Our tankers can carry up to 30,000 Litres of Drinking water plus can be delivered anywhere throughout the UK. All of the drinking water we deliver is tested and quality assured. Furthermore, if required our trained water technicians can also carry out additional water testing at site level.

Some alternative to Bulk Drinking Water:

- Water Bottles
- ECO H2O
- Water Cooler Hire

Steel Waste Tank Hire

Waste Tanks for Hire & Sale

Tardis steel waste tanks are made to withstand the rough demand of a busy construction site. With many sizes available, they can be placed underneath a welfare cabin or be buried alongside the unit.

We can also offer a macerator pump to sit along side our waste tanks and assist with the movement of wet waste.

Tardis waste tanks are available in many stock sizes.

Common capacity waste tanks for construction and events industries that we supply are:

- 2700 litres (600 gallons)
- 4500 litres (1000 gallons)
- 9000 litres (2000 gallons)
- 13600 litres (3000 gallons)

Plastic Waste Tanks

An alternative we offer to our steel waste tanks is plastic waste tanks. These tanks can be interlinked by using a linking kit.

Durable but lightweight

They are easily stackable allowing for easier transportation on smaller vehicles.

Custom Build Waste Tanks

Our fabrication team manufacture and supply fully bespoke steel waste tanks. If you require a specific size tank, give us a call we can build it! Although the tanks may be bespoke, we can also react fast and manufacturer most tanks with a fast turn around.

These can be tailored for specific needs. For example, a waste float meter can be fitted to measure the amount of waste in the tank. We can provide additional fixtures and fittings upon request.

Optional extras include:

- Sight glass
- External ladder
- Internal ladder
- Bauer type ball valve outlet
- High level alarm
- Waste float meter

If you can sketch it, we can build it.

Our custom build project for one of our clients was for a huge 52,500 litre capacity waste tank!

Measuring at a huge 10 metres long, 2.5 metres high and 2.1 metres wide. This is our biggest manufactured waste tank to date.

Due to the sheer size of this tank, it requires steps to even reach the access point for emptying. If you need steps for your tank we can also fabricate these.

We can also supply:

- IBC Bunds
- IBC Stands
- Waste Tank Steps
- Lifting Protective Cages for Toilets
- Bespoke tanks
- Static bowers
- Towable bowers
- Specialist service vehicle bodies
- A wide range of general fabrications to suit customers requirements.

Check out our range of bespoke waste tanks on our spec sheet library.

Elongated Steel Waste Tanks

Tardis has the UK's largest stock of elongated waste tanks. These are ideal for use underneath a toilet block due to its slim-line design. The most common tanks we have are 2700 litres (600 gallons) and the 4500 litres (1000 gallons), 6800 litres (1500 gallons). We can also offer a regular emptying service for these tanks.

For all your tank enquires please contact our friendly sales team for a quote.

Tardis on Site Fitter Services

Waste tanks, water tanks, and supplementary products may require additional setup. For example, plumbing a waste tank into a welfare setup. If your site does not have the personnel to provide this service, call on one of our Tardis Fitters.

Tardis Fitters can provide professional plumbing and electrical services on site.

Macerator Pumps

This pump is ideal for installations where the receiving waste vessel is located higher than the waste outlet. In certain circumstances, your tank could be placed higher than ground level meaning the water has to go uphill. A macerator pump is useful for this type of situation and for sites that have an uneven ground or limited space.

Bulk Waste & Water Tank

Suitable for:

- Waste water storage
- Large welfare units
- Construction sites
- Grey water
- Rain storage

For more information, take a look out the spec sheet library.

We also have available static bulk waste storage tanks.

Available for short or long term hire.

Crane Wagon Delivery

We have a fleet of crane wagons to enable the delivery of heavier plant throughout the UK.

Variations:

- 18 Tonne Crane Vehicle
- 26 Tonne Crane Vehicle

Drainage Services

Tardis Environmental has a solution to provide nationwide high-pressure Jetting & CCTV drainage services. Many new builds require drainage services after construction. Issues can occur in pipework, in particular, blocked drains. The first sign of a problem is often by smell and of course, overflowing wastewater.

We have a variety of waste tankers such as our 18-tonne and 26-tonne high volume jet vac tanker. With a high-pressure lance, our 26-tonne jet vac tanker can unblock and clean drains quickly.

Drainage services that we provide include:

- Drain Services & Repairs
- Interceptor Emptying
- High-Pressure Jetting
- CCTV Surveys

High Pressure Jetting

High-pressure jetting compliments our complete range of drainage services. The Tardis tanker fleet can cover the removal of the waste while also providing the high-pressure jetting service. Whether it's silt, bricks, mud or domestic blockages we can remove it.

Our tankers feature a high-pressure lance and a reel of hose to unblock the drain using high-pressure water. It also has a gully arm fitted for roadside drain work.

Drain Services & Repairs

Drain repairs and services consist of using an existing drain map alongside CCTV footage. Once the issue has been pinpointed the service can take place. Most common problems can be overgrown roots or pipe damage. A couple of services that could take place are root cutting or relining of drains. If it's a simple blockage, then it will need jetting.

The most common faults found in drainage and sewage systems include:

- Grease Build Up
- Displaced joints
- Silt build up
- Root infestation

Interceptor Cleaning & Emptying

Drain interceptors separate oil and other contaminants from liquid wastewater. Over time, there will be a build-up of water, grit, soil, and other pollutants. Without cleaning or maintenance, build up of such contaminants can cause flooding. Especially on large sites, interceptor cleaning and maintenance is an essential factor for the site to run efficiently and environmentally.

A Tardis Operative will arrive on site with a jet vac tanker to remove all the wastewater found inside the interceptor. We will then dispose of the wet waste at the appropriate waste disposal facility.

CCTV Surveys

A CCTV survey can be used for many different jobs. The crawler unit navigates through the pipes to provide footage of the area with issues inside the drainage system. Once the survey is complete a full report and map can be provided on CD or a digital copy.
